

# prognostics - de weg naar 100% betrouwbaar onderhoud?

# process optimalisatie

the discipline of adjusting a **process** so as to **optimize** some specified set of parameters **without violating** some constraint:

# designed for maintenance

deep learning zorgt er voor dat een algoritme 1.000 ontwerpen kan genereren en evalueren. **Binnen een uur.**

# prognostics

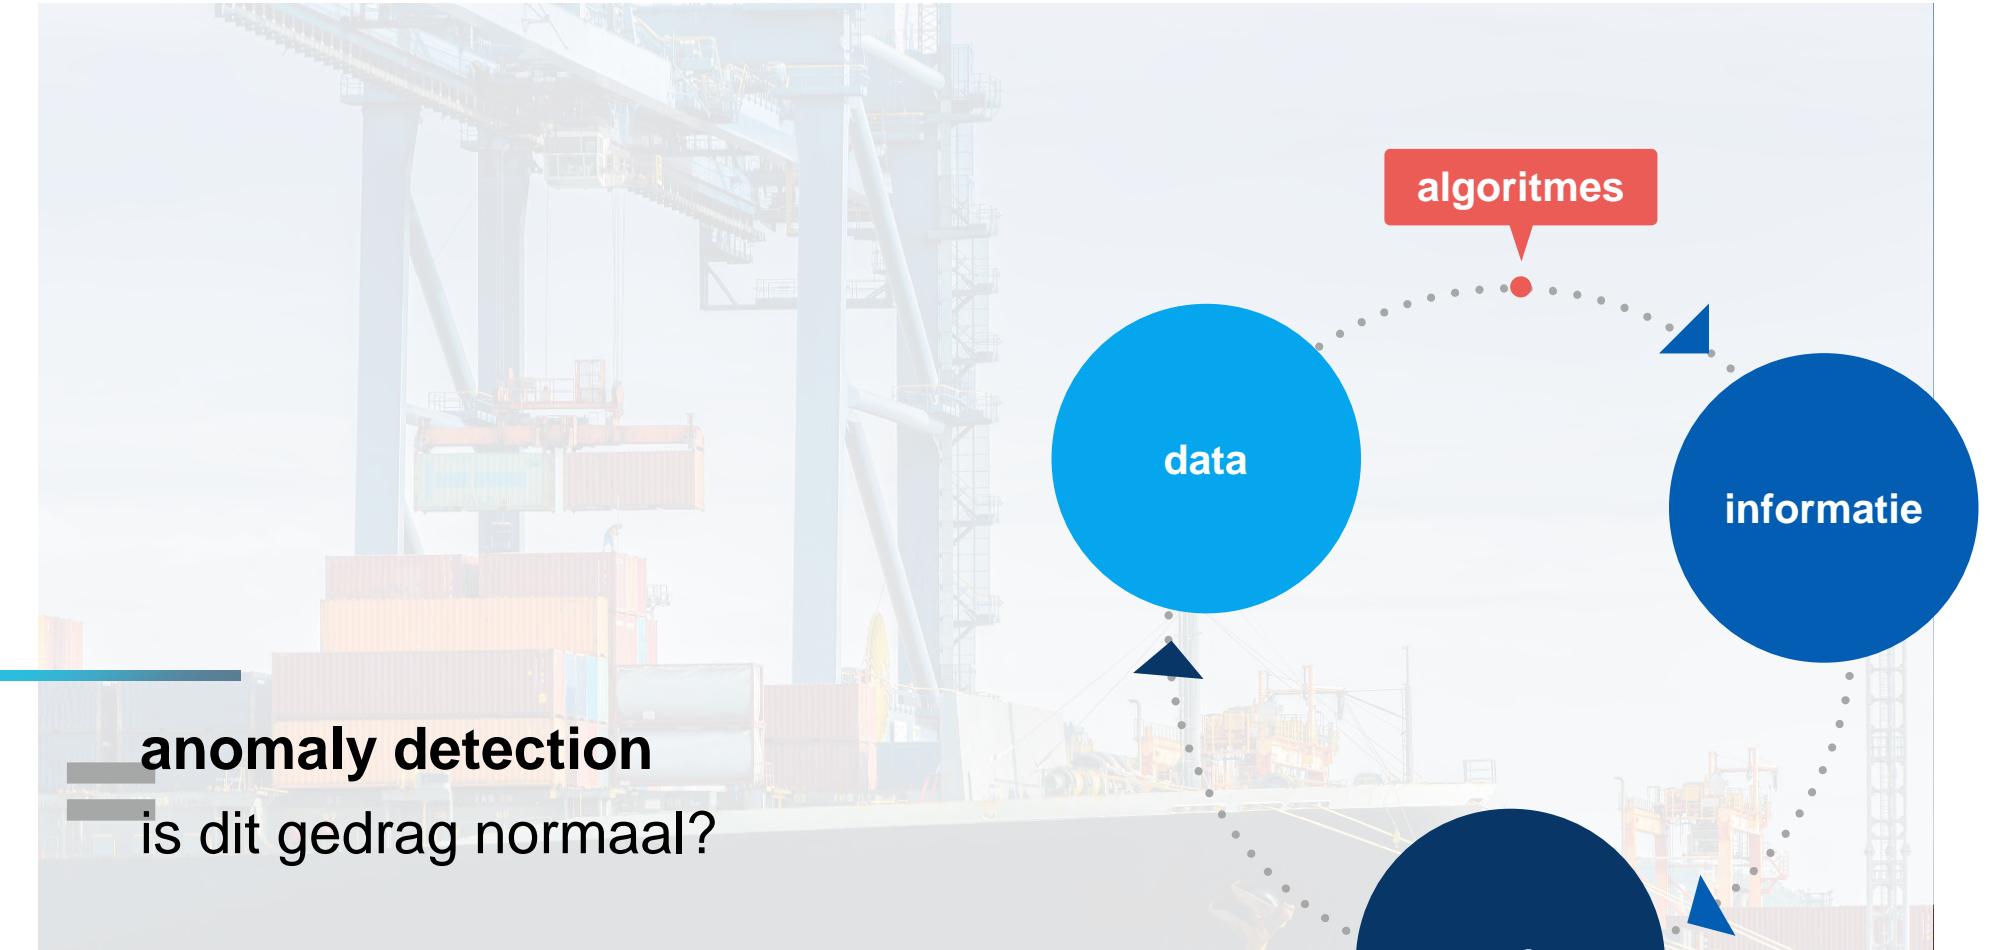

voorspellen **wanneer** en **waarom** machines falen.

1. 5%-10% totale kosten
2. complexiteit groeit
3. efficiency vereist

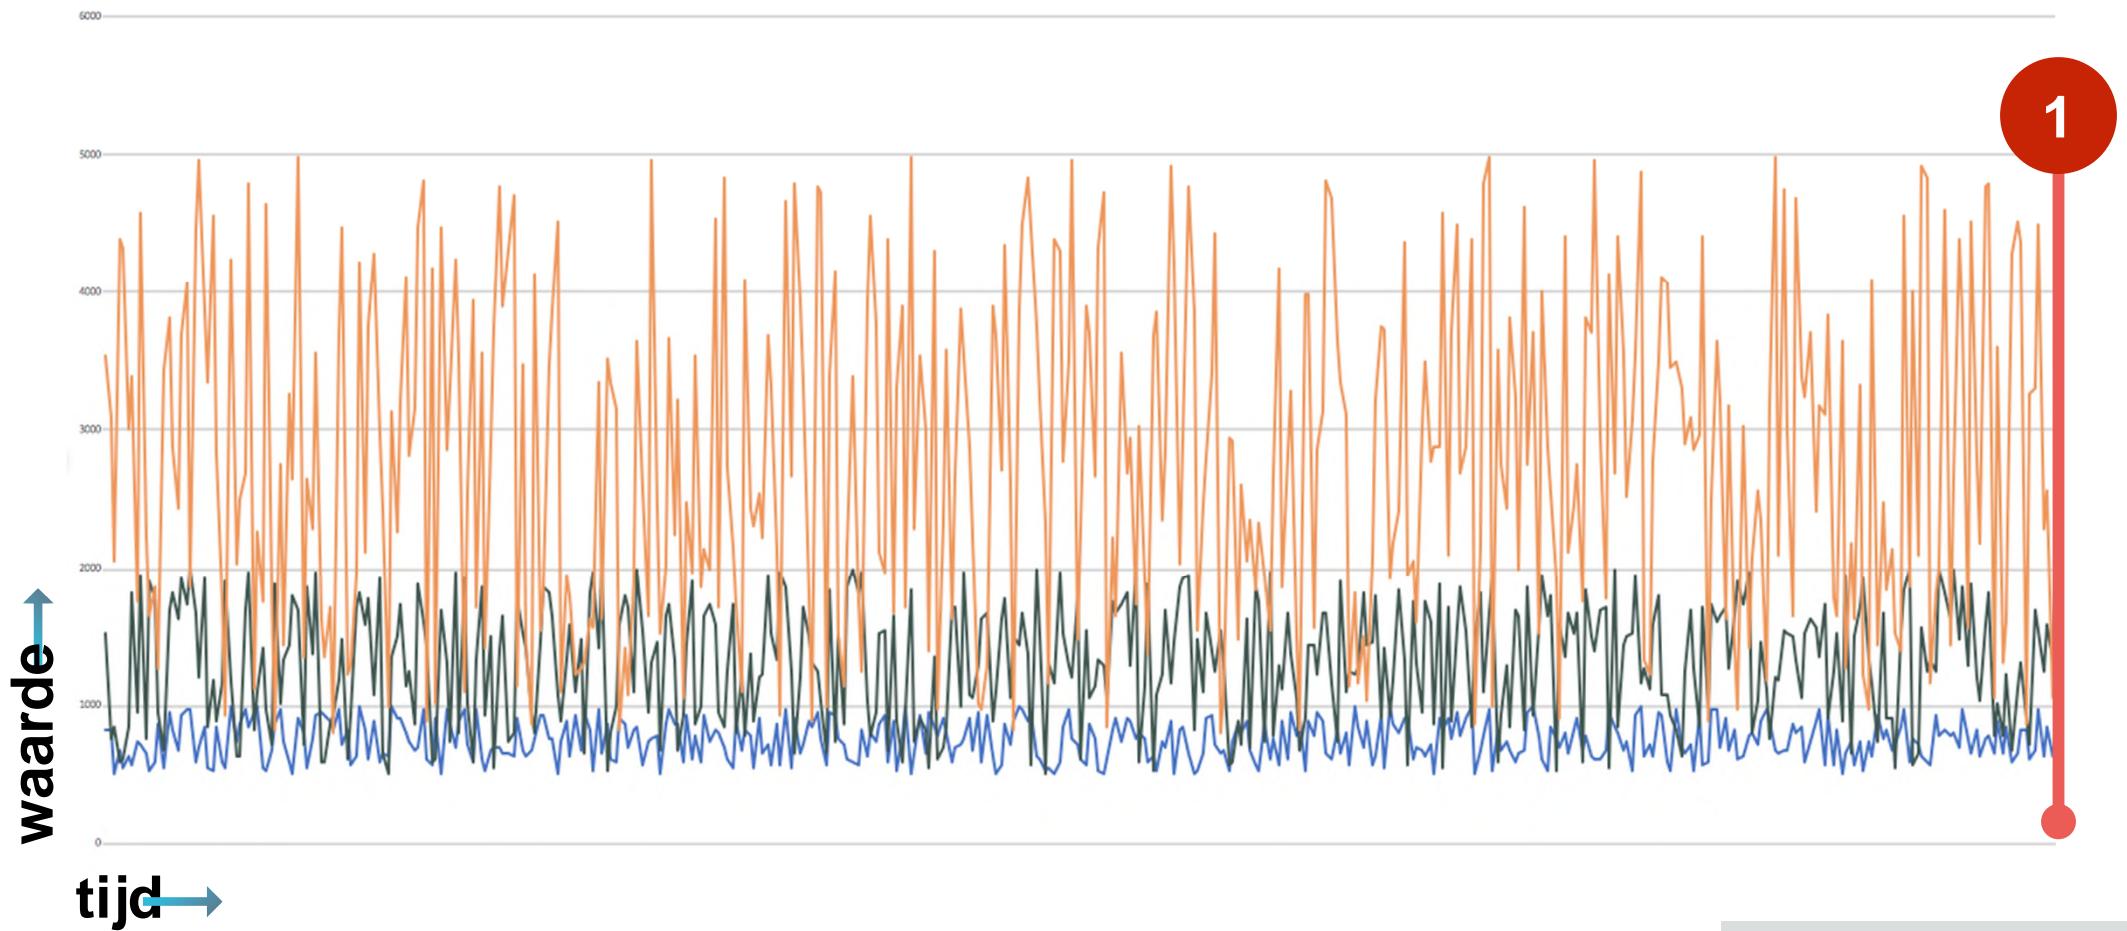

## industrieel onderhoud

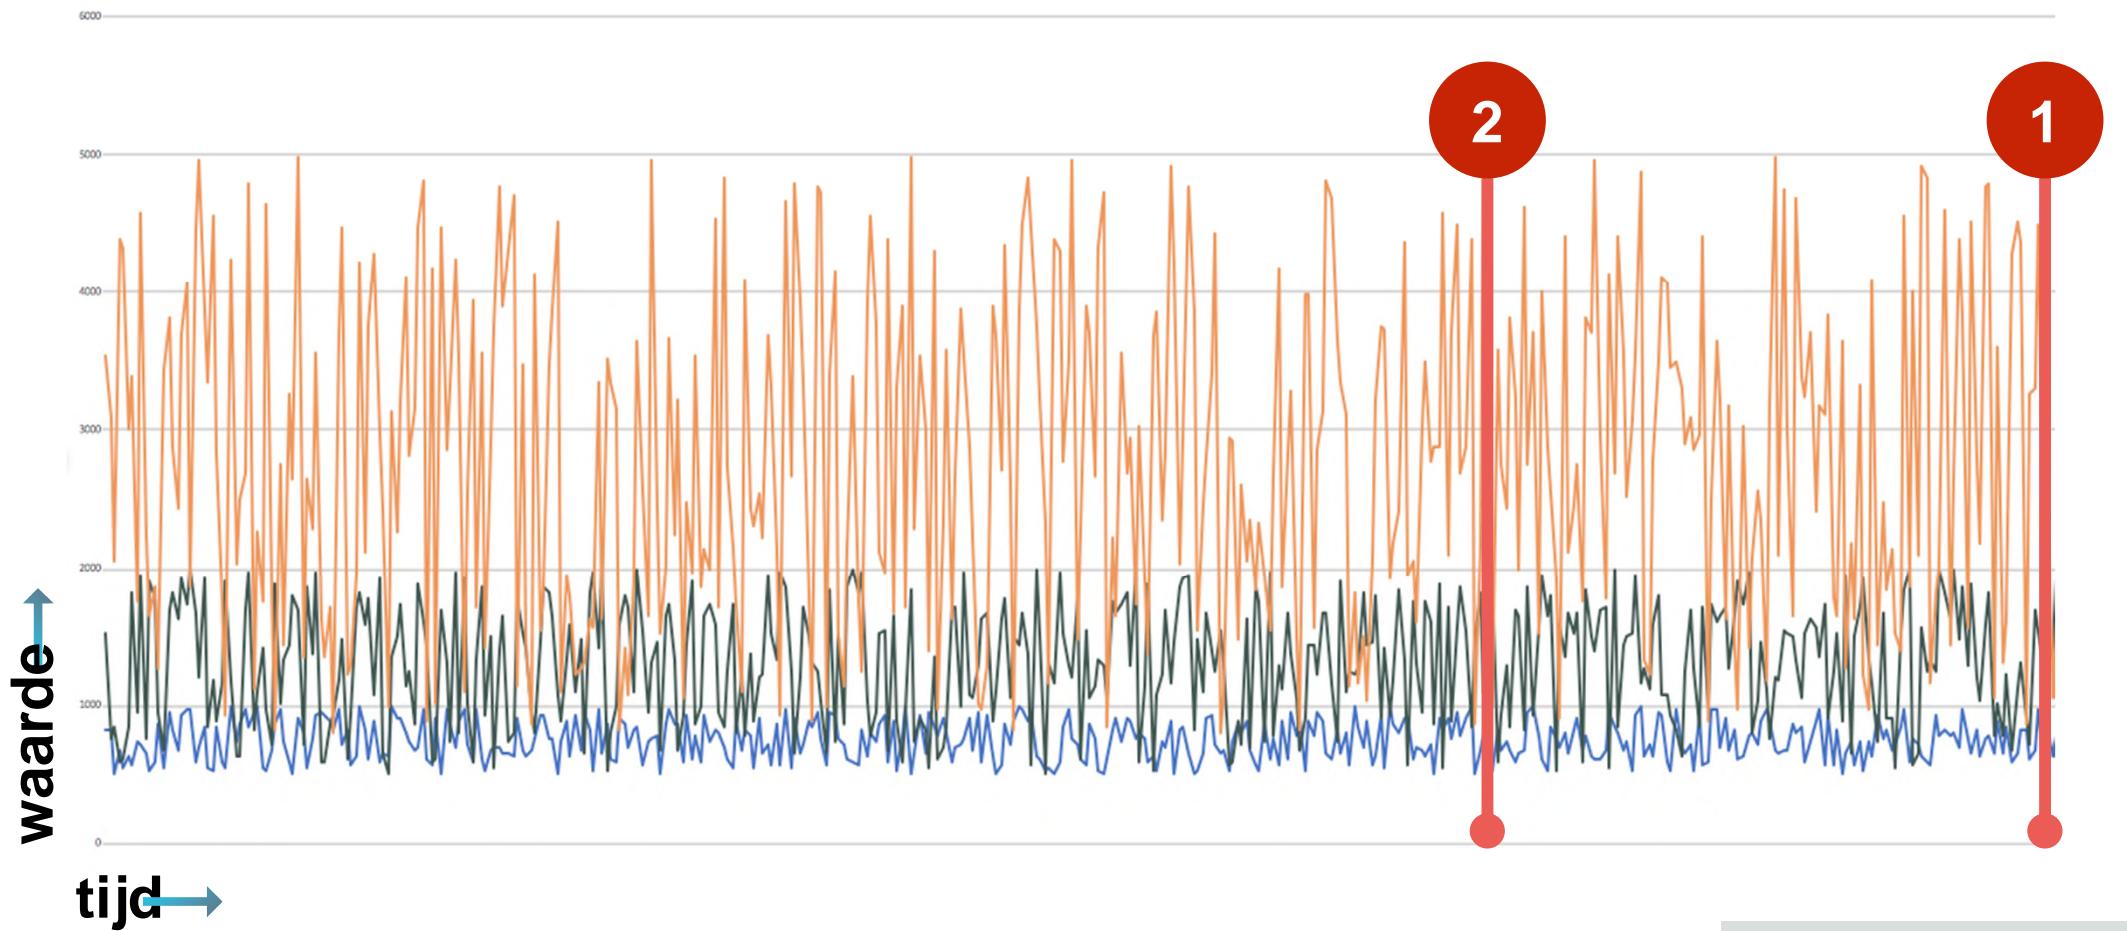

**anomaly detection**  
is dit gedrag normaal?

**pattern matching**  
wat betekent dit patroon?

# databronnen

point where impending failure is detected is Potential Failure (P)

1 geluid

1 - 5 dagen

2 thermographie

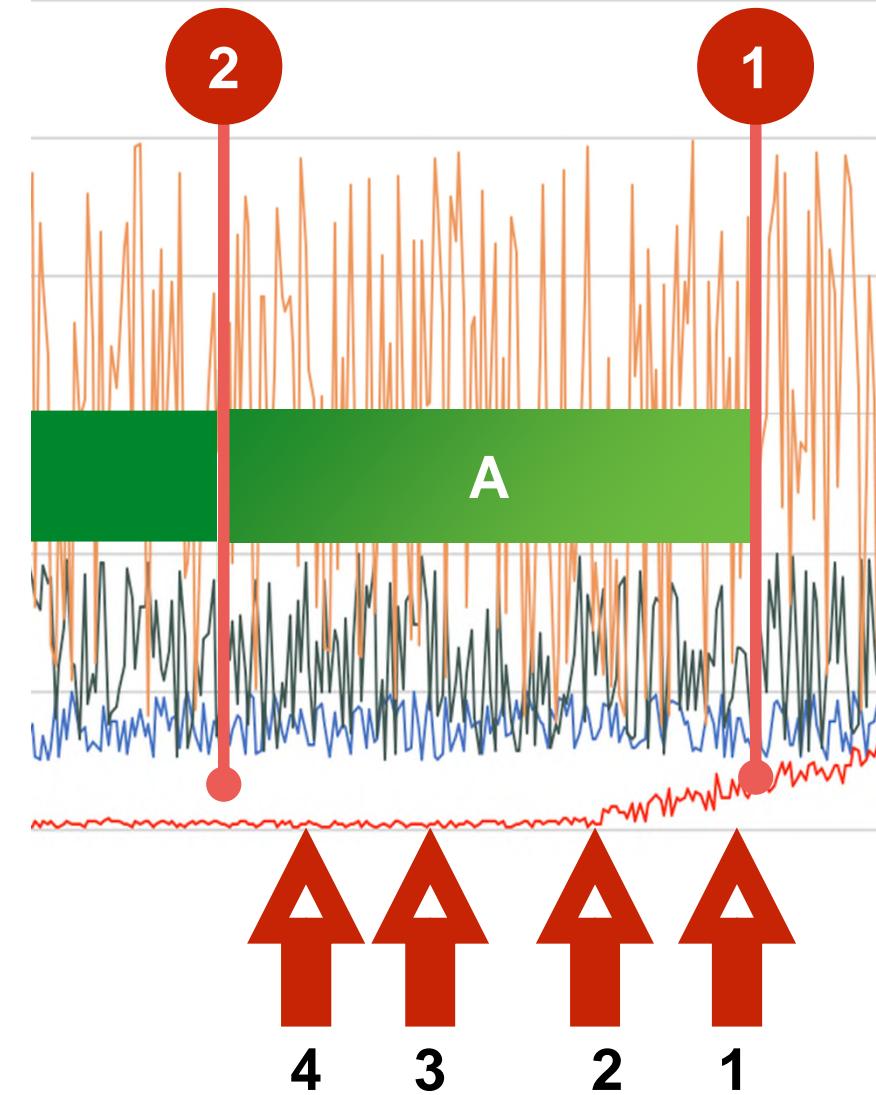

3 - 12 weken

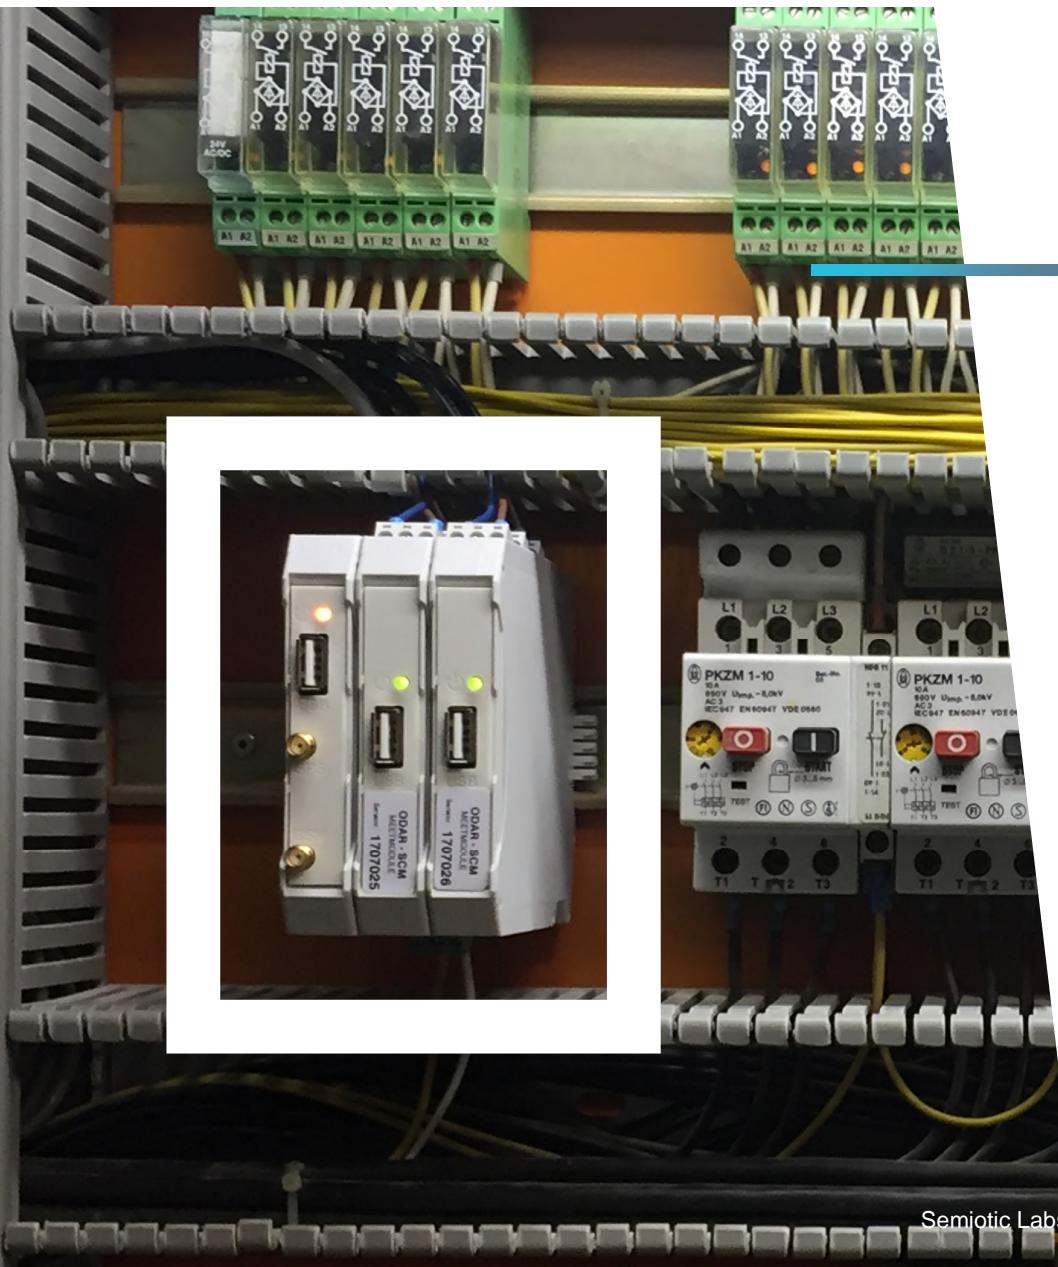

3 offline analyse

1 - 6 maanden

4 trilling + stroom

1 - 9 maanden

## praktische overwegingen

1. kosten sensor
2. gebruiksgemak
3. time to value
